

Sensitivity across seven conversation conditions

192 mobile users | 600 s | 3 paired seeds

● Coordinated

◆ Turn boundary

Solid markers / whiskers: seed mean $\pm$ sample SD (not confidence intervals); faint dots: individual seeds.

Completion ratios are paired by seed; dashed line = equal completions. Shading = main condition.

* Uncalibrated per-server decode budget, separate from prefill. Time-step change also changes mobility/prediction grids.
